

ETK EES Ground connections for medical use

GENERAL INFORMATION

Equipotential grounding creates an equipotential ground connection, avoiding voltages that could be accessible, within critical medical areas, such as surgical units or intensive care units.

The EES ground connector can be permanently attached to any conductive metal part, which can be found within a critical medical area.

Its grip is designed with a screw terminal, requiring a suitable tool for its connection.

TECHNICAL DATA

| | |
|-------------------|---|
| Nuts and washers | Nickel plated brass |
| Body | Grey or black polycarbonate and yellow/green serigraphy |
| Cable connections | 4mm ² or 6 mm ² conductors |
